

20MM QUANTOCK CHIPPINGS

Derived from the Quantock Hills, our brand new Quantock 20mm product is a superb new addition to the Eco Range.

Contemporary and modern, the Quantock 20mm aggregate is a brilliant option for a decorative garden scheme. The pieces are angular shaped and roughly chipped for a natural finish.

Commonly, the pieces are used on driveways as they create a firm surface which is an ideal application for front garden schemes. The colour, size and stone itself are all perfect for creating a striking and solid surface.

The Quantock pieces are also ideal for pathways and general landscaping projects as they add a fashionable finish to recreational areas.

The decorative chippings can also be used alongside alternative aggregates for a hardwearing rockery or feature patio area.

As with most aggregate chippings, the pieces are obtained from natural stone so they hold their form and boast a healthy life span for years to come.

Main Uses:	Driveways, Decorative Landscaping, Pathways & Rockeries
Size:	20mm
Colour:	Grey - This aggregate is a natural quarried stone which is light grey in colour. It's worth noting that when the material is wet, the colour will become a dark grey whereas in normal dry conditions, the material is a lighter, dove grey.
Shape:	Angular - The Quantock 20mm pieces are a naturally quarried product which may result in slight variations in formation, size, colour or shape.
Rock Type:	Quantock Stone
