

PREMIUM ROOTZONE SOIL

The Rootzone is a sandy loam and is screened to a 10mm particle size.

Due to the sand content within the soil, the material is very fine and particles are often below the 10mm screen size.

As always to ensure our customers are working with a safe and quality composition, all materials are tested to a British Standard.

Rootzone is an ideal soil for construction of sports surfaces including; tennis, football and golf course grounds.

pH:	6.7
Clay:	<0.002mm - 9%
Silt:	0.002 - 0.063mm - 20%
Sand:	0.063 - 2mm - 71%
Stones:	2-20mm - 2%
Purity:	Substantially free of physical contaminants, viable weed seeds and pathogens

User Benefits

- Map references are available upon request to pinpoint the soil's source and in some cases, field history
- Excellent material for construction as supports root growth
- Provides good drainage

Restrictions

Our Rootzone Soil is not designed for use as a top dressing.

A test certificate is available upon request.
